Upcoming & Questions

Goals

- easily maintained documentation
- intuitive and simple instructions
- apply the documentation to a variety of different customers
- showcase unique selling points

Deliverables

Walkthrough

- iterative research
- audience-focused information architecture
- abstracting information
- creating simple steps

Data Model

- realistic and high-coverage datasets
- high utility database across many fields
- minimalist entities and relations
- simple database to supplement the walkthrough

Process

- using interdisciplinary background to approach the project from different perspectives
- learning to work with ambiguity and iteratively develop documentation
- abstracting complex information to frame current and future work
- improving communication skills to find resources

Upcoming

- Iterative development of the database and QuickSight Q topics
 - Refining analytics used in topics for realism
 - Demo video of topics, potentially used along with the walkthrough
 - Documentation on research, the data model, and other considerations
- 
- The bottom of the slide features decorative elements consisting of two parallel diagonal lines in shades of blue, extending from the left edge towards the right, and a light blue shaded area at the very bottom.

Questions

- What are potential areas for improvement within my database model?
- What kind of analytics can I use to make my topics in QuickSight Q more realistic?
- How can I best address the differences in field, technical expertise, and QuickSight experience within the documentation?
